

# NANO-X Information

## x-clean® EC 7000 Series

### Principle:

The x-clean® EC 7000 series are coating materials with Easy-to-Clean properties for porous stone surfaces (concrete, sandstone, granite) and wood. The diffusion of water, oily and coloured contaminations (e.g. soot, leaves, oil, ink, coffee, red wine, mustard, etc.) is prevented by sealing of the surface in combination with the hydrophobic properties. The chemical resistance of the surfaces is increased.

Oil and fatty contaminations on an impregnated granite and sandstone surface

Oil and fatty contaminations on an impregnated wood surface

### Product properties:

- Application by roller coating
- Curing at room temperature, thermal or UV-curing
- Easy-to-Clean surface
- Less adhesion of dirt
- Less cleaning time
- Reduced overgrowth with moss and algae
- Increasing of colour brilliance (colourdeepening)
- Good water vapour permeability
- Good weather stability
- For consumer and industrial markets

### Fields of application:

- Concrete
- Sandstone
- Granite
- Wood surfaces with different porosity
